

Caring for your hair has never been easy.

SHĒA

WHY CHOOSE BEAUTY GARAGE?

- **CERTIFIED** and dermatological tested product by the University of Tel Aviv and by the FDA.

- **OPTIMIZED** products that make your hair smooth, shine, frizz free for 12-15 wash, thanks to Sustained Release (SR) System.

- **CONTROLLED** treatment in micro encapsulated form gives a chance to rebuild 18-MEA carbon chain.

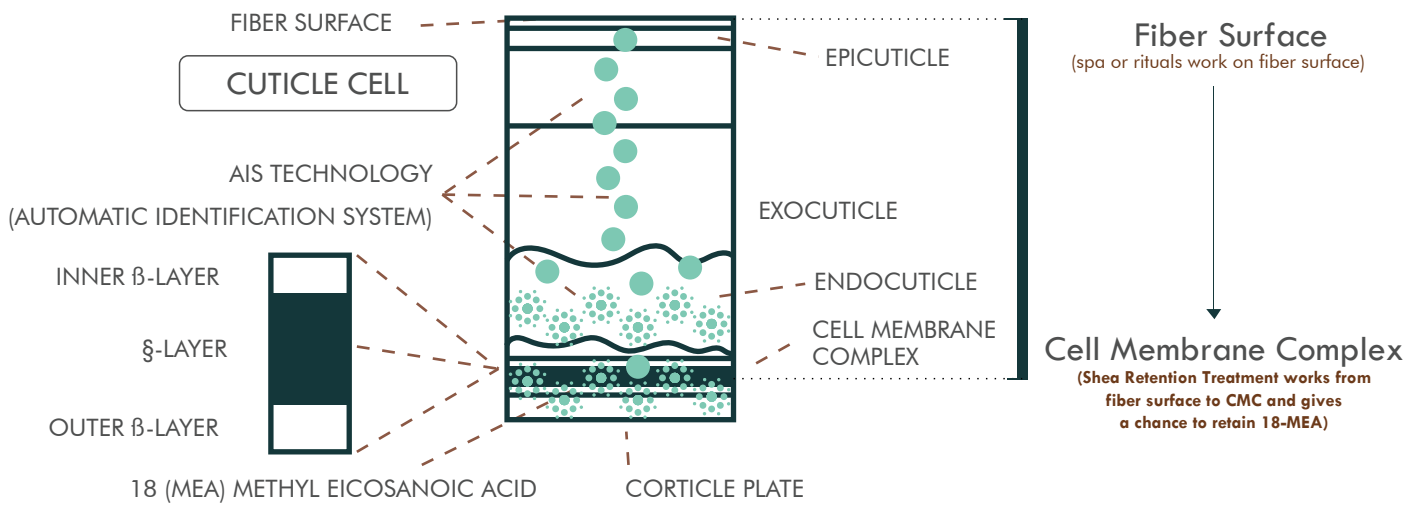

- **REDUCE** the chances of hair damage and split ends by 99%, thanks to the AIS TECHNOLOGY.

- **OBTAIN** an incomparable result.

- **MEET THE NEW AGE NEEDS** of the end customer.

HAIR SCIENCE BEHIND RETENTION TREATMENT

Let's understand the cuticle according to hair science

A cuticle is an outer layer of hair made of keratinized flat cells overlapping from roots to tips. This multi-layered structure contains 6-10 layers called cuticle.

Shea retention treatment acts on the innermost layer of damaged cuticles caused by environmental factors, & chemical treatment. This hair care treatment retains softness, moisture, elasticity, and shine by protecting and repairing the cuticle and gives a change to retain 18 mea.

18- MEA

18 mea acts as a cushion, it retains optimum amount of moisture.

Loss of the protective 18-mea layer renders hair hydrophilicity so that it absorbs too much water from the environment, which leads to frizz, swelling and breaking of structures causing physical damage.

AIS TECHNOLOGY

AIS technology is a targeted approach that works specifically on a targeted area. Shea retention treatment paired with AIS technology anchors active ingredients on the damaged part of the hair on the site of action.

MICRO ENCAPSULATED

All ingredients in shea retention treatment are encapsulated in the micro form, covered with a layer of gelatin.

SUSTAIN RELEASE (SR)

This layer bursts open at the time of delivery, when it is required at the damaged part in a sustained way, meaning slow and steady release in several hours. This is a perk, as the treatment may be done within 60-90 minutes but all the active ingredients will continue to be released even after several hours from the treatment, penetrating deeper into the innermost layer of the cuticle. This allows shea retention treatment to last longer when compared to other hair spas and rituals. It may last up to 12 to 15 washes.

SHEA STORY

How Shea is produced?

Nature's Gift.

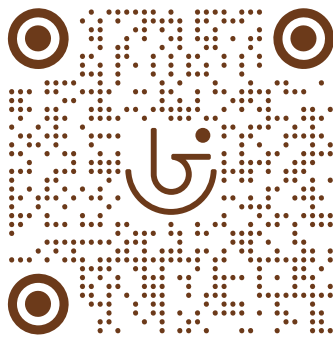

It takes 50 years to produce SHEA nuts.

It is produced in West Africa (Ghana Country)

We use purest from of SHEA in our series.

Making of SHEA

• SHEA TREATMENT BOWL

Features: Sustainable

Usage: Salon Professional

Technique: Wood Handcraft

Color: Natural Wood Color

Extract From: Spondias Sap Tree

GET THE COOLEST LOOK WITH SHEA RETENTION SERIES

Our shea retention series optimally treats, restores and rejuvenates dry, frizzy & damaged hair. A high concentration of shea butter rich in vitamins A, E, & F, amino acids & keratin ensures hair becomes silky soft, radiant, flexible whilst the amino acids boost the proteins vital for repairing damage.

SHEA INJECTOR

A shea injector is the result of long, exclusive research to refine the Top layer of shea butter. This layer is highly-concentrated in natural Keratin, amino acids, and proteins. Our unique formula for flawless Hair also contains special polymers which provide complex, intensive Treatment for nourishing and repairing your hair from roots to tips.

STYLIST TIP

If the injector gets frozen, put glass bottle under a flow of warm Water before being used to restore its natural liquid texture.

HEATING CAP

EVEN HEAT DISTRIBUTION

It adopts silicone heating wire and non-woven flame retardant material. It will make your hair evenly heated.

HIGH QUALITY FABRIC

Water proof

PROTECTIVE FUNCTION

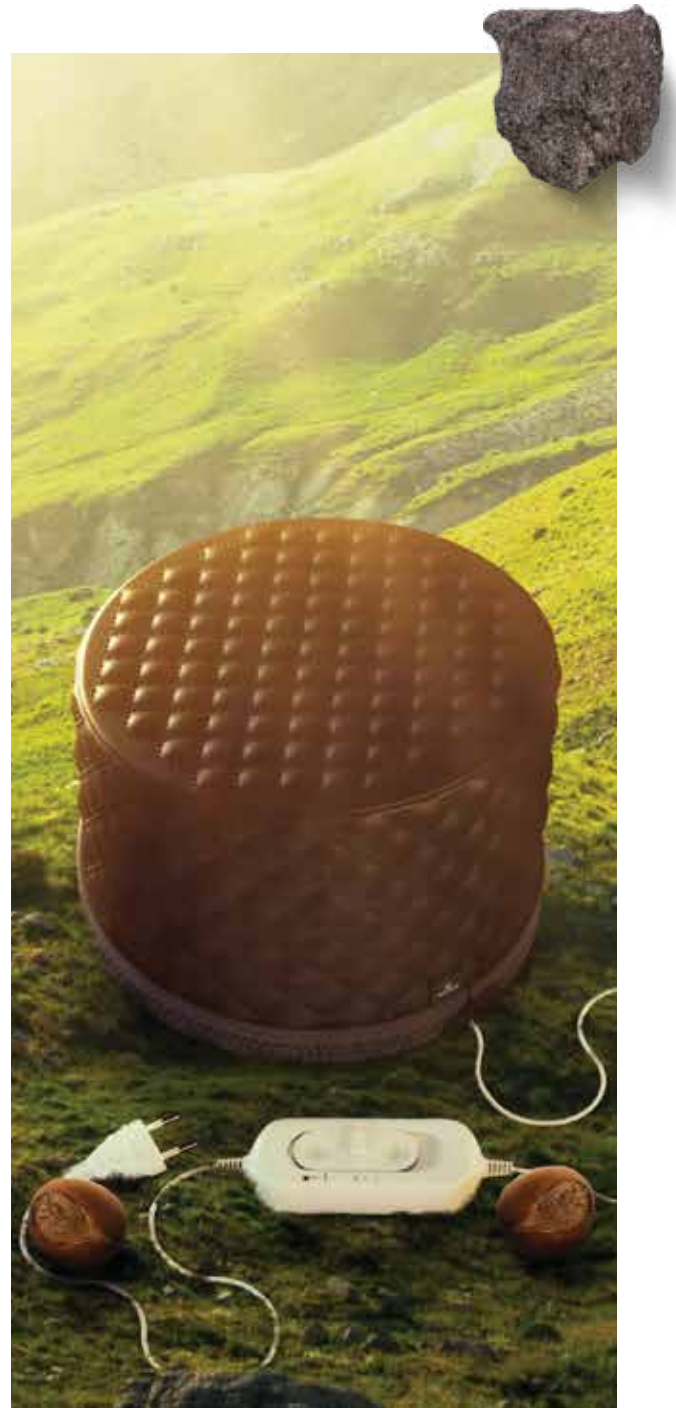

When the temperature reaches 600, thermostat automatically disconnects the power supply, avoids high temperature and generates hidden problems. when temperature is below 300, It will automatically continue heating.

INCREASES EFFECTIVENESS

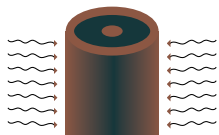

The silicone heat helps injector, mast and oil to penetrate on each and every strands of hair evenly.

USAGE

Use shower cap before putting cap on hair.

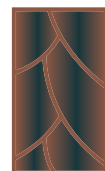

Voltage : 110-220v | Frequency : 50Hz | Power : 45W

Swelling Of Cuticle
By Heat

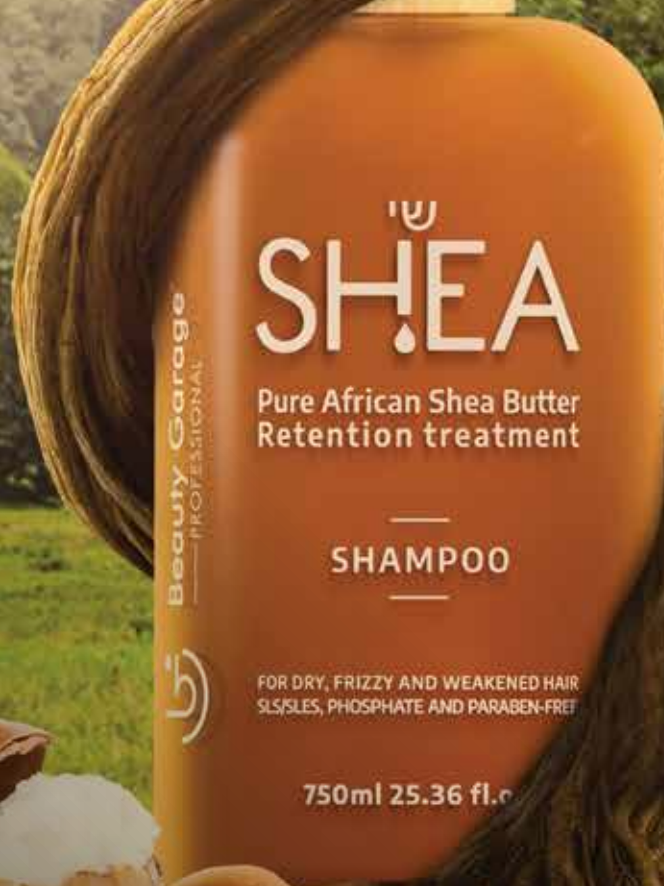

Infusing Protein From
Injector And Butter Deep
Into The Cuticle

After Penetration Of
Proteins, Repairs
Damage and Looks Soft
And Smooth
